# Swapnil Dahiphale

## Systems Reliability Specialist

Strategic technologist with 10 years of experience architecting reliable infrastructure for platforms processing terabytes of daily data. Expert in cloud optimization, containerization strategies, and automated deployment.

### Certifications

- Machine Learning Model Deployment
- Red Hat Delivery Specialist - Cloud
- Automation (Ansible)
- RedHat DELIVERY SPECIALIST - PLATFORM-
- AS-A-SERVICE (OpenShift)
- AWS Certified Solutions Architect
- Certified Jenkins Engineer
- Red Hat Certified Engineer
- Red Hat Certified System Administrator

### Tech Experties

Cloud Technologies - AWS, GCP
Containerization - Kubernetes, AWS ECS, Openshift, Istio
Log Management - ELK, Grafana Loki
Config Management - Ansible, Chef
Observability - Prometheus, Grafana, Datadog, Newrelic
CICD - Jenkins, DroneCI, Harness, Argo
IAC - Terraform, Atlantis, Cloud Formation
Programming - Python, SQL

## Summary

- Experienced professional with a proven track record in both enterprise corporations and dynamic startups across various industries.
- Owned architectural design and implementation of critical projects like Multi-geography Cloud Infrastructure, Deployment Automation, Containerization and Observability implementation.
- Designed and implemented high-availability cloud solutions capable of processing and storing **10+ TB** of daily **log data** across multiple geographical regions
- Developed a **multi-agent AI** system using knowledge graphs to maintain system context, enabling autonomous investigation and resolution of infrastructure incidents.

### **Staff SRE** at Vimo India Private Limited

**Oct 2023 - Present**

- Strategic execution of **Call-AI** acquisition, revamping services with containerization and bespoke CI/CD in Vimo's cloud environment. (Call AI)
- Architected and deployed end-to-end dynamic environment provisioning for Vimo's Health Exchange SaaS platform, enhancing scalability and resource efficiency.

### **Staff SRE** at Mobile Primer League(MPL)

**Feb 2019 - Sept 2023**

- Held multiple roles including Staff SRE, Engineering Manager and DevOps Lead, showcasing versatility and leadership across roles.
- Led the architecture and migration of **100+** microservices to a **Kubernetes** environment leveraging **Istio Mesh**
- Engineered a highly available and scalable **AWS** infrastructure to accommodate the exponential growth and demanding workloads of MPL
- Implemented a cutting-edge log management stack with **ELK**, effectively handling **10+ TB** of daily log data across multiple geographical regions
- Streamlined deployment strategy, selected optimal tool sets, and executed AMI-based deployments leveraging **Harness** and AWS EC2 Autoscaling Groups across multiple geographical regions
- Designed and implemented Terraform and Atlantis-based IaC
- Implemented Python and Serverless framework-based automations to address various infrastructure challenges
- Extensive experience in observability, implementing robust monitoring using Prometheus, Thanos, Grafana, and Jaeger
- Collaborated with data scientists and engineers to understand ML development workflows, Implemented POC on **ML Observability**

### **Founding Member & DevOps Lead** at Crevise Techologies - Acquired by MPL

**June 2016 - Jan 2019**

## Learnings

- AI Agents in LangGraph
- Agentic RAG with Llamaindex
- LangChain for LLM Application Development
- Efficiently Serving LLMs
- Prompt Engineering for Developers

(From DeepLearning.ai, Andrew Ng)

- Led the successful cloud migration project for an enterprise client, **Cathay Pacific Airways**, as the project lead and Ansible developer
- Containerized a microservices application using Docker and Kubernetes
- Integrated automated tests with the CI pipeline using DroneCI
- Implemented log monitoring with Graylog.

### **DevOps Engineer** at Whitehedge Technologies

**Sept 2015 - June 2016**

- Successfully proposed and implemented highly available and scalable architectures on AWS
- Implemented CI pipelines with Jenkins, utilized Chef for infrastructure automation
- Worked with various AWS services, including CodeDeploy, S3, EC2, ECS and CloudFormation
- Implemented monitoring and logging solutions with DataDog and Loggly.

### **DevOps Engineer** at Webinise Labs (Haptiq)

**Nov 2014 - Aug 2015**

- Managed Linux servers (VMs & cloud) and automated application deployment with tools like Webistrano, Capistrano, Cargo, and Chef
- Deployment automation of multiple technology stacks like ROR, Django, NodeJS, Tomcat, Glassfis
- Implemented LDAP centralized authentication, automated backups, and ensured OS security measures
- Used virtualization technologies like OpenVZ, OpenStack, Vspher±
- Utilized Nagios for server monitoring.

## Education

### **Bachelor of Engineering- Computer Science**

Pune University

2014
